If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

***Examiners Amendment***

1. In Applicant's Response dated 04/24/2008, Applicant amendments and arguments are persuasive.

All objections and rejections previously set forth are withdrawn.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Dave Franklin on 07/24/2008.

**Please amend the claims as shown in the attached from applicant (See claim amendment).**

***Allowable Subject Matter***

2. Claims 1-17, 20-30, 32-33, 35-38, and 40-47 are allowed.
3. The following is an examiner's statement of reasons for allowance

*Claims 1, 23, 32, and 33*

The closest prior art of Clark et al (6725228) teaches an email client that allows for automatic organization of messages into specific subject, folder, time. Clark also teaches a layering system that allows the message to be organized by status, keyword or manually created folders (See figure 7). Clark is not seen as detecting that a **real time** communication exists between a first and second user and then based on the characteristic of the first message then determining a second message is inactive and dynamically organizing the message into an inactive cluster to show the first message as active and the second message as inactive while

displaying the active message in a more prominent manner. Specifically, the prior art is not seen as teaching the dynamic organization of messages based on the **real-time** characteristic of a message and then organizing the message into an active status while then moving a second message into an inactive status.

The prior art of Matsubara et al (20040201668) teaches a system of displaying folders, much like the folders of Clark, where the folders that are displayed are only to those whom are associated with a folder. For example, Matsubara teaches a presence indicator to alert the user that the other user is online or active (two communications See Para 68-70) and only presents the users that are active if they are online to the current user (See Para 77-79), which is an active characteristic of the message if it was received from a user online. Therefore, as the user organizes and requests folders the system clearly indicates to the user the presence of the other user and organizes the content to reflect the status of the users (See also Para 92 and 99). Matsubara specifically teaches a process of alerting a user who has access to a folder to the presence of another user and updates the display. Matsubara is not seen as disclosing or detecting that a **real time** communication exists between a first and second user and then based on the characteristic of the first message then determining a second message is inactive and dynamically organizing the message into an inactive cluster to show the first message as active and the second message as inactive while displaying the active message in a more prominent manner. Specifically, the prior art is not seen as teaching the dynamic organization of messages based on the **real-time** characteristic of a message and then organizing the message into an active status while then moving a second message into an inactive status.

Therefore, the prior art is not seen as teaching the claims as a whole and are considered allowable over the prior art.

*Claims 2-17, 20-22, 24-30, 35-38, 40-47*

These claims are dependent upon Claims 1, 23, 32 and 33 and are thus allowable.

### 101 And Computer Readable Medium

The record shows a 101 rejection included in the final rejection mail 09/25/2007 for claims 1-22, 31, and 33-34. Applicant subsequently cancelled claims 31 and 34 and amended claims 1-22, and 33, to positively include a display that is a hardware element. Therefore, the all previous objections and rejections were removed and the claims are interpreted as falling within the scope of MPEP 2106.

The computer readable storage medium finds support in the specification as follows:

[0057] the system memory 716 includes volatile memory 720 and nonvolatile memory 722. The basic input/output system (BIOS), containing the basic routines to transfer information between elements within the computer 712, such as during start-up, is stored in nonvolatile memory 722. **By way of illustration, and not limitation, nonvolatile memory 722 can include read only memory (ROM), programmable ROM (PROM), electrically programmable ROM (EPROM), electrically erasable ROM (EEPROM), or flash memory. Volatile memory 720 includes random access memory (RAM), which acts as external cache memory. By way of illustration and not limitation, RAM is available in many forms such as synchronous RAM (SRAM), dynamic RAM (DRAM), synchronous DRAM (SDRAM), double data rate SDRAM (DDR SDRAM), enhanced SDRAM (ESDRAM), Synchlink DRAM (SLDRAM), and direct Rambus RAM (DRRAM).**

[0058] **Computer 712 also includes removable/nonremovable, volatile/nonvolatile computer storage media.** FIG. 7 illustrates, for example, a disk storage 724. Disk storage 724 includes, but is not limited to, devices like a magnetic disk drive, floppy disk drive, tape drive, Jaz drive, Zip drive, LS-100 drive, flash memory card, or memory stick. In addition, disk storage 724 can include storage media separately or in combination with other storage media including, but not limited to, an optical disk drive such as a compact disk ROM device (CD-ROM), CD recordable drive (CD-R Drive), CD rewritable drive (CD-RW Drive) or a digital versatile disk ROM drive (DVD-ROM). To facilitate connection of the disk storage devices 724 to the system bus 718, a removable or non-removable interface is typically used such as interface 726.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee.

Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
